Guest Operating System Installation
A virtual machine is like a physical computer; it needs an operating system. How will you install the guest operating system?

Install from:

☐ Installer disc:

No drives available

☒ Installer disc image file (iso):

C:\Others\Splunk_Project\win10.iso

Browse...

 Windows 10 x64 detected.
This operating system will use Easy Install. [\(What's this?\)](#)

☐ I will install the operating system later.
The virtual machine will be created with a blank hard disk.

Easy Install Information
This is used to install Windows 10 x64.

Windows product key

Version of Windows to install

Personalize Windows
Full name:

Password: (optional)
Confirm:

☐ Log on automatically (requires a password)

5. Enter a virtual name and select a location where you want to save VM files.
6. Default storage space is enough, just select **Store virtual disk as a single file**, then Next.

New Virtual Machine Wizard ✕

Specify Disk Capacity
How large do you want this disk to be?

The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.

Maximum disk size (GB): ▲ ▼

Recommended size for Windows 10 x64: 60 GB

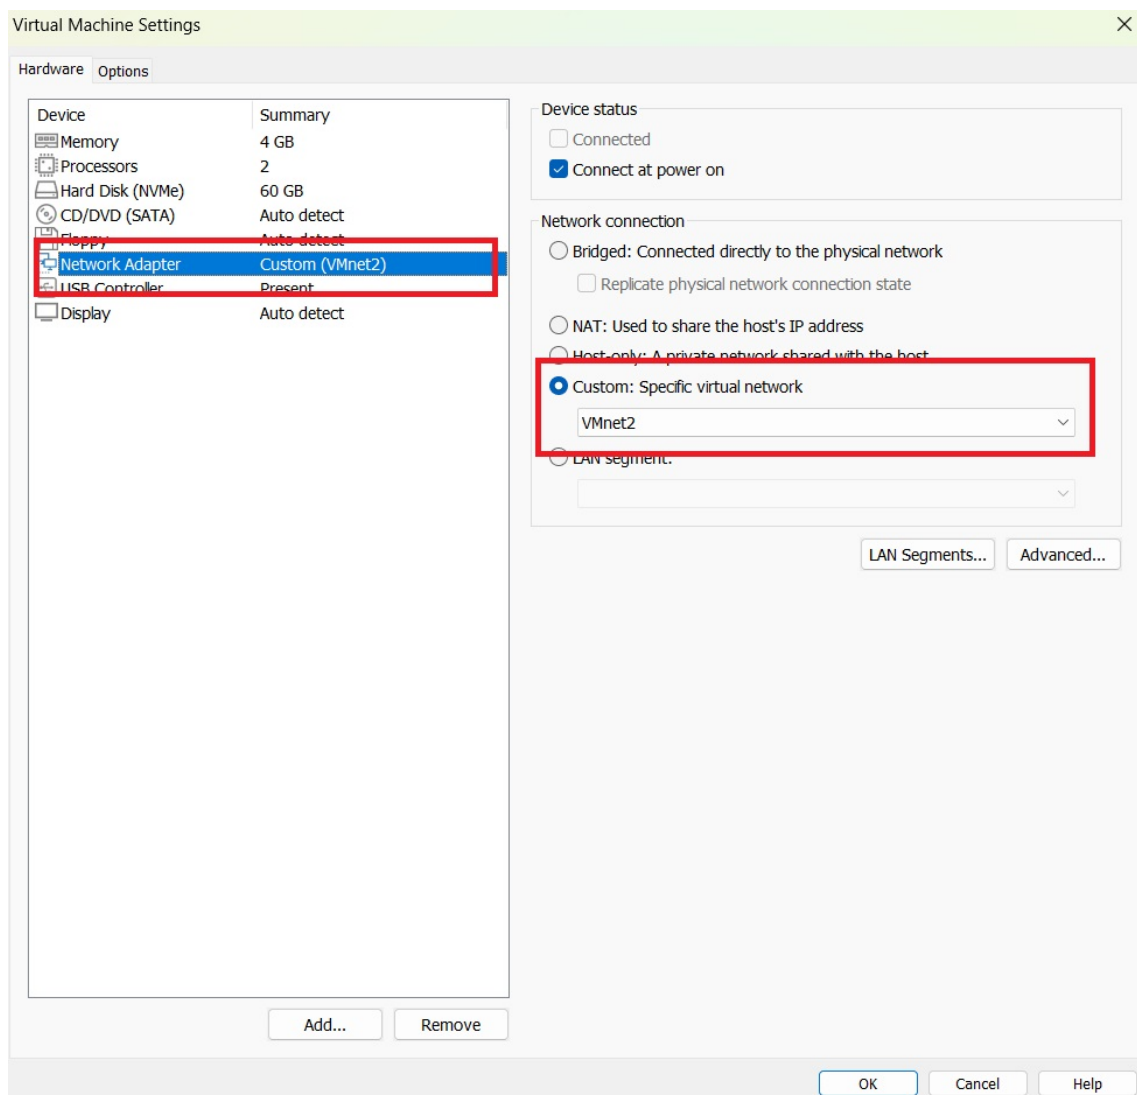

☒ Store virtual disk as a single file

☐ Split virtual disk into multiple files

Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.

7. Choose **Customize Hardware**
8. Change Network Adapter to **VMnet2**, since according to lab network topology, Windows 10 host is in the range of 192.168.1.0/24 and is connected to PfSense interface EM1 via VMNet2.

9. Click Finish and finish installation.
